

Michael Tang

for IT and Infrastructure Officer

About me

Hello! My name is Michael, and I am reading for an MPhil in Advanced Computer Science. I studied at the University of Hong Kong for my undergraduate degree, and I will be continuing to my PhD studies next year.

My Experience

I created a website for my undergraduate research project (<https://i.cs.hku.hk/fyp/2017/fyp17028/>) and had experience working with other web developers on building a website for displaying air quality information of the Cambridge city. I also had experience in other aspects of software development.

I have been active in student societies and voluntary activities. I worked as the president of a student society representing Macao students in Hong Kong, as a classroom assistant in computer science at a local school in Cambridge, and several other positions.

Goals

As an IT and Infrastructure Officer, I would be managing the MCR website, assisting other officers with communication, and looking after the MCR rooms and stores. I would commit myself to ensure the accessibility of these resources to the MCR members.

My goals for the coming year are:

1. To maintain the MCR website and keep it updated with MCR information;
2. To ensure the availability of the MCR rooms and facilities for student activities;
3. To assist other members of the MCR on communications; and
4. To improve the accessibility of contents, including information of events and materials for freshers, on the MCR website.
